#### Note:

- The system compares the number with the pattern that you have defined in your route 1. If
  matches, it will initiate the call using the selected trunks. If it does not, it will compare the
  number with the pattern you have defined in route 2 and so on. The outbound route which is
  in a higher position will be matched firstly.
- Adjust the outbound route sequence by clicking these buttons  $\overline{\otimes} \overline{\otimes} \overline{\otimes} \overline{\otimes}$ .
